

Define genotype, phenotype, dominant allele, recessive allele, codominant allele, locus, homozygous, heterozygous, carrier and test cross.

How do you determine genotypes and phenotypes of the offspring of a monohybrid and dihybrid cross?

What are multiple allele traits?

What are chromosomes made of? Draw, Label, and Explain

What are the definitions of gene, allele, and genome?

What is a gene mutation?

What are translocations?

How can you map genes by percentage cross over?

What are linked genes?

How can you identify offspring that are recombinants in a dihybrid cross?
